EDUCATION:

FACULTY OF ELECTRONIC ENGINEERING

2021 - present

Expected graduation: 2026

Computer science and informatics

SKILLS:

- Backend:
  C#, . NET, Node.js, Java
- Frontend:
  React, JavaScript, HTML, CSS
- Databases:
  PostgreSQL, Neo4j, Redis, MongoDB
- Concepts:
  REST APIs, JWT, OOP, EF Core
- Tools:
  Git, Postman, Scalar, Swagger

LANGUAGE:

- Serbian
- English

SUMMARY:

Final-year Computer Science student with only my thesis remaining, focused on backend development and currently completing a full-stack dormitory management system as my thesis project. Comfortable working with .NET, REST APIs, and relational databases.

PROJECTS:

Dorm MS

- A dormitory management system built as my thesis project (in progress). Features student competition applications, a scoring and ranking system, and role-based access control. Built with .NET, Entity Framework Core, and PostgreSQL.

MovieApp

- Developed a web application that enables users to create public and private watched-movie lists with ratings and comments.
- Built a recommendation system using Neo4j to model relationships between genres, actors, and ratings, and implemented a Redis Pub/Sub mechanism for managing ratings, comments, and real-time notifications.

EVouchers

- Developed a web application that simplifies the process of obtaining and using tourism vouchers.
- Users can browse available accommodation units and make reservations with or without vouchers.
- Built using the MERN stack

RouteExplorer

- Developed an Android mobile application in Kotlin for discovering and filtering locations for running, walking, driving and cycling.
- Integrated Google Maps API for location display and navigation, and Firebase for real-time data storage, ratings,and comments.
